

[illegible]

Reagents that regulate human transmembrane serine protease activity and reagents that bind to human transmembrane serine protease gene products can be used to regulate extracellular matrix degradation. Such regulation is particularly useful for treating COPD, metastasis of malignant cells, tumor angiogenesis, inflammation, atherosclerosis, neurodegenerative diseases, and pathogenic infections.

Reagents that regulate human transmembrane serine protease activity and
5 reagents that bind to human transmembrane serine protease gene products can be used
to regulate extracellular matrix degradation. Such regulation is particularly useful for
treating COPD, metastasis of malignant cells, tumor angiogenesis, inflammation,
atherosclerosis, neurodegenerative diseases, and pathogenic infections.
